The screenshot displays the CloudQAtest configuration interface. On the left, a table lists various field types with their names, field types, and associated user forms. The table includes columns for 'Name', 'Field Type', 'User Forms', and 'Age'. The 'Name' column contains entries like 'Toggle button', 'Date', 'Date and time', 'URL Field', 'Currency', 'Smart field', 'smart field 001', 'Single-line Text', 'checkbox', 'Single select', 'Smart Field', 'variable hidden field', and 'file field'. The 'Field Type' column lists 'Toggle', 'Date', 'Date & Time', 'URL', 'Currency', 'Smart Field', 'Single-line Text', 'Select Field', 'Hidden', and 'File'. The 'User Forms' column lists 'Default, Registration TEST, Form Test, Custom Department 2'. The 'Age' column is partially visible.

On the right, a sidebar shows configuration options for a selected field. It includes a 'User Form' dropdown menu with options: 'Registration TEST', 'Form Test', and 'Custom Department 2'. Below this, there are sections for 'Description', 'Reference Alias', 'Default value' (with a red box around the 'Single-line Text' option), 'User validation' (with a dropdown menu set to 'Agent Validation'), and 'Min. characters' and 'Max. characters' input fields. A checkbox for 'Enable agent validation when the ticket is being resolved' is also present.
