The screenshot displays the CloudQAtest interface. On the left, there is a table with columns for Name, Field Type, and User Forms. The table lists various field types such as Toggle button, Date, Date and time, URL Field, Currency, Smart field, smart field 001, Single-line Text, checkbox, Single select, Smart Field, variable hidden field, and file field. On the right, there is a configuration panel for a field type. The panel includes sections for User Form, Description, Reference Alias, and Agent Validation. The 'Default value' is set to 'Single-line Text', and the 'Agent Validation' is set to 'Require agent to provide value'. There are also input fields for 'Min. characters' (set to 1) and 'Max. characters', and a checkbox for 'Enable agent validation when the ticket is being resolved'.
