The screenshot shows a web browser window with the URL `support.mailspcc.com/app9/r/article/7`. The page title is "How to Configure the MAPI Connector with Outlook 2019?". The article content includes:

- Paragraph** for Outlook allows you to use an email account with all the usual pros of a standard ActiveSync connection to the **CommunicateGate** server while mapping all directories to their CGP equivalents, such as RSS feeds, searches, Outlook's Rec Mailbox's Trash folder, etc.
- The more important features of the MAPI connector include shared mailboxes, calls, and chats being made directly from Outlook and the implementation of server-wide filter rules/mailbox delegation to Outlook.
- Let's start the MAPI configuration by downloading the latest version from the links in our [Help Desk](https://helpdesk.communicategate.com/en/downloads).
- You just need to extract the archive, run the setup.exe and click on the "Install" button in order to install the MAPI plugin.
- Then you can go to your **Control Panel** -> **User Accounts** -> **Mail** in order to add a new profile or to modify an existing profile by selecting it and clicking "Properties". In our example, we'll add a new profile:

An inset window titled "Mail" shows the "General" tab of a profile configuration dialog. It displays "The following profiles are set up on this computer:" with an empty list. The "Add..." button is highlighted with a red box. Below the list, there are radio buttons for "Prompt for a profile to be used" (unselected) and "Always use this profile" (selected). The "Always use this profile" option is selected.

At the bottom of the article, a note states: "On the following screen, make sure you choose the option for 'Manual setup or additional server types', where you will have the **CommunicateGate** Pro Server listed under 'Other'."
