If you ask your **parents**, they will **probably remember** a time **when** tea in **trains** was **served** in **plastic glasses** which had to be **returned** to the **vendor**. The **introduction** of **disposable** cups was **hailed** as a step **forward** for **reasons** of **hygiene**. No one at that time perhaps **thought** about the **impact** caused by the **disposal** of **millions** of these cups on a daily basis. Some time back, kulhads, that is, disposable cups made of clay, were **suggested** as an alternative. But a little thought showed that making these kulhads on a large scale would result in the loss of the fertile top-soil. Now disposable paper-cups are being used. What do you think are the advantages of disposable paper-cups over disposable plastic cups?

- Search the internet or library to find out what hazardous materials have to be dealt with while disposing of electronic items.
- How would these materials affect the environment? n Find out how plastics are recycled. Does the recycling process have any impact on the environment?

All organisms such as plants, animals, microorganisms and human beings as well as the physical surroundings interact with each other and maintain a balance in nature. All the interacting organisms in an area together with the non-living constituents of the environment form an ecosystem. Thus, an ecosystem consists of biotic components comprising living organisms and abiotic components comprising physical factors like temperature, rainfall, wind, soil and minerals.
